

# Design Decisions for the YAGO schema

Fabian Suchanek, Mehwish Alam, Thomas Bonald,  
Pierre-Henri Paris, Jules Soria

Telecom Paris, Institut Polytechnique de Paris, France

`{first.last}@telecom-paris.fr, jules.soria@ip-paris.fr`

In this document, we explain and justify the design decisions taken for the schema of YAGO 4.5. For each class, we list (1) the superclasses, (2) the Wikidata classes that we map to, (3) the properties that we define, and (4) a justification for our decisions.

*YAGO 4.5 Upper level class hierarchy*

<b>schema:Thing</b>	<b>5</b>
<b>schema:CreativeWork</b>	<b>5</b>
schema:Book	5
schema:Newspaper	5
schema:TVSeries	6
schema:MusicComposition	6
schema:Movie	6
<b>schema:Event</b>	<b>6</b>
yago:Election	7
<b>schema:Organization</b>	<b>7</b>
schema:Corporation	7
schema:Airline	8
Schema:EducationalOrganization	8
schema:PerformingGroup	8
schema:MusicGroup	8
<b>schema:Person</b>	<b>8</b>
yago:Worker	9
yago:Creator	9
yago:Academic	9

yago:Gender	13
schema:Language	13
<b>yago:FictionalEntity</b>	<b>14</b>
<b>YAGO 4.0 Previous Properties</b>	<b>15</b>

*Precisions:*

We use the following abbreviations:

- *time format* = the union of:
  - `xsd:dateTime`
  - `xsd:date`
  - `xsd:gYearMonth`
  - `xsd:gYear`
- A Class or Property that is part of the [Schema.org](http://Schema.org) ontology will be written *without* the `schema:` prefix
- \* indicates that a Class or Property starts with the `yago:` prefix
- a data type that starts with the `xsd:` prefix will be written *without* that prefix
  - `xsd:decimal`
  - `xsd:string`
  - `xsd:anyURI`
  - `xsd:anyType`
- † indicates that a Property is a relation whose inverse exists in Schema.org or Wikidata, and where we made a choice between the relation and its inverse.
- → indicates the range of a Property
- →<sup>1</sup> indicates that the Property has a maximum cardinality of 1

## schema:Thing

1. Top-level class.
2. Not mapped to any Wikidata class, because it defines only few and very general properties. By mapping this class to Wikidata, we would invite a large number of entities (>1m) that are basically uncategorized.
3. Properties:
  - a. `alternateName` → `rdf:langString`
  - b. `rdfs:comment` → `rdf:langString`
  - c. `label` → `rdf:langString`
  - d. `MainEntityOfPage` → `anyURI`
  - e. `URL` → `anyURI`
  - f. `sameAs` → `anyType`
  - g. `image` → `anyURI`

## schema:CreativeWork

1. Subclass of `schema:Thing`, for anything that can be conceived and created by the human mind, including art works, books, ideas, theories, etc.
2. Mapped to:
  - a. [creative work](#) (Q17537576)
  - b. [work](#) (Q386724)
3. Properties:
  - a. `about` → `Thing`
  - b. `award` → `Award*`
  - c. `author` → `(Person or Organization)`
  - d. `contentLocation` → `Place`
  - e. `dateCreated` → <sup>1</sup> *time format*
  - f. `inLanguage` → `Language`

## schema:Book

1. Subclass of `schema:CreativeWork`.
2. Mapped to [book](#) (Q571)
3. Properties:
  - a. `isbn` → <sup>1</sup> `string`
  - b. `numberOfPages` → <sup>1</sup> `decimal`
  - c. `editor (P98)` → `Person`
  - d. `illustrator (P110)` → `Person`
  - e. `publisher (P123)` → <sup>1</sup> `Organization`

## schema:Newspaper

1. Subclass of `schema:CreativeWork`
2. Mapped to [newspaper](#) (Q11032)
3. Properties:
  - a. `publisher` → `(Person or Organization)`
  - b. `sponsor` → `(Person or Organization)`

### schema:TVSeries

1. Subclass of `schema:CreativeWork`
2. Mapped to [television series](#) (Q5398426)
3. Properties:
  - a. `actor` → `Person`
  - b. `countryOfOrigin` → `Country`
  - c. `director` → `Person`
  - d. `numberOfEpisodes` →<sup>1</sup> decimal
  - e. `numberOfSeasons` →<sup>1</sup> decimal
  - f. `productionCompany` → `Organization`
  - g. `musicBy` (P86) → (Person or MusicGroup)

### schema:MusicComposition

1. Subclass of `schema:CreativeWork`
2. Mapped to [composed musical work](#) (Q207628) and [musical work](#) (Q2188189)
3. Properties:
  - a. `composer` → (Person or MusicGroup)
  - b. `iswcCode` →<sup>1</sup> string
  - c. `lyricist` → (Person or MusicGroup)

### schema:Movie

1. Subclass of `schema:CreativeWork`
2. Mapped to [film](#) (Q11424)
3. Properties:
  - a. `actor` → `Person`
  - b. `countryOfOrigin` → `Country`
  - c. `director` → `Person`
  - d. `duration` →<sup>1</sup> decimal
  - e. `productionCompany` → `Organization`
  - f. `musicBy` (P86) → (Person or MusicGroup)

### schema:Event

1. Subclass of `schema:Thing`
2. Mapped to:
  - a. [occurrence](#) (Q1190554). In Wikidata, this class groups events that are not scheduled (such as wars), which is what we need for YAGO.
  - b. [event](#) (Q1656682). In Wikidata, event is a subclass of occurrence. If we do not add the mapping to Q1656682 explicitly, we would have two classes called “event” in YAGO.
3. Properties:
  - a. `about` → `Thing`
  - b. `location` → `Place`
  - c. `organizer` → (Person or Organization)

- d. startDate  $\rightarrow^1$  *time format*
- e. endDate  $\rightarrow^1$  *time format*
- f. sponsor  $\rightarrow$  (Person or Organization)
- g. superEvent $\dagger$   $\rightarrow$  Event
- h. follows\*  $\rightarrow$  event
- i. participant\*  $\rightarrow$  (Person or Organization)

We discard duration, which would have been redundant with startDate and endDate. We prefer superEvent over subEvent, because it has fewer objects, as per Design Principle 1.

### yago:Election

- 1. Subclass of `schema:Event`
- 2. Mapped to [public election](#) (Q40231)
- 3. We have defined no properties for this class, we manually define it so that Elections are correctly considered as subclasses of Events and not Creative Works.

### schema:Organization

- 1. Subclass of `schema:Thing`
- 2. Mapped to Organization (Q43229)
- 3. Properties:
  - a. award  $\rightarrow$  Award\*
  - b. dissolutionDate  $\rightarrow^1$  *time format*
  - c. duns  $\rightarrow^1$  string
  - d. founder  $\rightarrow$  Person
  - e. leader  $\rightarrow$  Person
  - f. motto  $\rightarrow$  string
  - g. address  $\rightarrow$  string
  - h. memberOf  $\rightarrow$  Organization
  - i. dateCreated  $\rightarrow^1$  *time format*
  - j. leiCode  $\rightarrow^1$  string
  - k. locationCreated  $\rightarrow$  Place
  - l. location  $\rightarrow$  Place
  - m. memberOf  $\rightarrow$  Organization
  - n. numberOfEmployees  $\rightarrow$  decimal
  - o. parentOrganization $\dagger$   $\rightarrow$  Organization. We gave preference to parentOrganization over childOrganization, because it has on average fewer objects.
  - p. logo  $\rightarrow$  anyURI

### schema:Corporation

- 1. Subclass of `schema:Organization`. (companies)
- 2. Mapped to:
  - a. [company](#) (Q783794)

- b. [business](#) (Q4830453). In Wikidata, this class identifies local businesses. For YAGO, we are just interested in companies in general.
3. No properties are defined for this class.

#### schema:Airline

1. Subclass of `schema:Corporation`.
2. Mapped to: [airline](#) (Q46970)
3. Properties:
  - a. `iataCode` →<sup>1</sup> string
  - b. `icaoCode` →<sup>1</sup> string

#### Schema:EducationalOrganization

1. Subclass of `schema:Organization`
2. Mapped to [educational organization](#) (Q5341295)
3. Properties:
  - a. `studentCount*` → decimal

#### schema:PerformingGroup

1. subclass of `schema:Organization`
2. mapped to the Wikidata class: [performing arts group](#) (Q105815710)
3. We have defined the following property for this class:
  - a. `director*` → Person
4. This class is currently present mostly for the MusicGroup class to be properly defined.

#### schema:MusicGroup

1. The `schema:MusicGroup` class is a bottom-level class that we have imported from schema.org, it is a subclass of `schema:PerformingGroup`
2. This class is mapped to the following Wikidata class: [musical ensemble](#) (Q2088357)
3. We have defined the following property for this class:
  - a. `influencedBy` → Thing
  - b. `notableWork*` → CreativeWork
  - c. `recordLabel` → Organization

#### schema:Person

1. The `schema:Person` class is a top-level class that we have imported from schema.org, it is a subclass of the top-level class `schema:Thing`
2. This class is mapped to the following Wikidata classes:
  - a. [human](#) (Q5)
  - b. [person](#) (Q215627)
3. We have defined the following properties for this class:
  - a. `beliefSystem*` → BeliefSystem\*
  - b. `academicDegree*` → Award\*

- c. affiliation → Organization
- d. alumniOf → Organization
- e. award → Award\*
- f. birthDate →<sup>1</sup> *time format*
- g. birthPlace →<sup>1</sup> Place
- h. children → Person
- i. deathDate →<sup>1</sup> *time format*
- j. deathPlace →<sup>1</sup> Place
- k. gender →<sup>1</sup> Gender\*
- l. homeLocation → Place
- m. knowLanguage → Language
- n. memberOf → Organization
- o. nationality → Country
- p. owns → Thing
- q. spouse → Person
- r. worksFor → Organization

#### yago:Worker

- 1. subclass of `schema:Person`
- 2. mapped to the following Wikidata classes:
  - a. [professional](#) (Q702269)
  - b. [worker](#) (Q327055)
- 3. We have defined no properties for this class. It is in YAGO 4.5 to serve as an intermediate superclass between `schema:Person` and individual professions.

#### yago:Creator

- 1. subclass of `yago:Worker`
- 2. mapped to [artist](#) (Q483501)
- 3. properties:
  - a. influencedBy → Thing
  - b. notableWork\* → CreativeWork

#### yago:Academic

- 1. subclass of `yago:Worker`
- 2. mapped to [academic professional](#) (Q66666685)
- 3. properties:
  - a. studentOf\* → Person
  - b. doctoralAdvisor\* → Person

#### yago:SportsPerson

- 1. subclass of `yago:Worker`
- 2. mapped to [sportsperson](#) (Q50995749)
- 3. properties:
  - a. sportNumber\* → string
  - b. playsIn\* → Event

### yago:Politician

1. subclass of `yago:Worker`
2. mapped to [politician](#) (Q82955)
3. properties:
  - a. `candidateIn*` → `Event`

### schema:Place

1. The `schema:Place` class is an top-level class that we have imported from `schema.org`, it is a subclass of `schema:Thing`
2. This class is purposefully not mapped to Wikidata in order to avoid obtaining messy subclasses when generating the whole YAGO ontology
3. We have defined the following properties for this class:
  - a. `containedInPlace` → `Place`
  - b. `area` → `decimal`
  - c. `highestPoint` → `Place`
  - d. `lowestPoint` → `Place`
  - e. `neighbors` → `Place`
  - f. `elevation` → `decimal`
  - g. `geo` →<sup>1</sup> `geo:wktLiteral`

### schema:AdministrativeArea

1. The `schema:AdministrativeArea` class is a class that we have imported from `schema.org`, it is a subclass of `schema:Place`. It designates places whose boundaries have been defined by humans.
2. This class is mapped to the Wikidata class: [administrative territorial entity](#) (Q56061)
3. We have defined the following properties:
  - `dateCreated` →<sup>1</sup> `time format`
  - `demonym` → `string`
  - `leader` → `Person`
  - `populationNumber` → `decimal`
  - `postalCode` → `string`
  - `motto` → `string`
  - `memberOf` → `Organization`
  - `administrates` → `Place`
  - `replaces*` → `AdministrativeArea`

### schema:City

1. subclass of `schema:AdministrativeArea`.
2. This class is mapped to the Wikidata classes:
  - a. [city or town](#) (Q7930989)
  - b. [city](#) (Q515)
3. We have defined no specific additional properties for this class, It exists as a range for the `yago:hasCapital` property.

### schema:Country

1. subclass of `schema:AdministrativeArea`
2. This class is mapped to the Wikidata class:
  - a. [country](#) (Q6256)
3. We have defined the following properties for this class:
  - a. `capital*` → City
  - b. `officialLanguage` → Language
  - c. `humanDevelopmentIndex` → decimal
  - d. `unemploymentRate` → decimal

### schema:Landform

1. Subclass of `schema:Place`
2. Mapped to the Wikidata classes:
  - a. [terrain](#) (Q14524493)
  - b. [landmass](#) (Q205895)
  - c. [geographic location](#) (Q2221906)
  - d. [natural geographical object](#) (Q35145263)
  - e. [landform](#) (Q271669)
  - f. [geographical area](#) (Q3622002)
  - g. [geographic region](#) (Q82794)
3. We have defined no class-specific properties for `schema:Landform`. It exists mainly to permit instances of landforms to be in YAGO, which would otherwise be excluded since `schema:Place` is a one-to-none mapping.

### schema:BodyOfWater

1. Subclass of `schema:Landform`
2. Mapped to the Wikidata classes:
  - a. [body of water](#) (Q15324)
  - b. [marine water body](#) (Q116126039)
3. We have defined the following property:
  - a. `flowsInto*` → BodyOfWater

### schema:Continent

1. Subclass of `schema:Landform`
2. Mapped to [continent](#) (Q5107)
3. We have defined no property for this class.

### yago:HumanMadeGeographicalEntity

1. Subclass of `schema:Place`
2. Mapped to the Wikidata classes, which are largely equivalent for our purposes:
  - a. [architectural structure](#) (Q811979)
  - b. [human-made geographic feature](#) (Q811430)
  - c. [human-made geographic feature](#) (Q811463)
  - d. [human-made geographic object](#) (Q35145743)

e. **human settlement (Q486972)**

3. We have defined the following properties
  - a. `dateCreated`  $\rightarrow^1$  *time format*
  - b. `ownedBy`  $\rightarrow$  (Person or Organization)

**yago:Way**

1. Subclass of `yago:HumanMadeGeographicalEntity`
2. This class is mapped to the Wikidata class:
  - a. [thoroughfare](#) (Q83620)
3. We have defined the following class-specific property
  - a. `length*`  $\rightarrow^1$  decimal
  - b. `terminus*`  $\rightarrow$  Place

**schema:Airport**

1. Subclass of `yago:HumanMadeGeographicalEntity`
2. Mapped to the Wikidata class: [airport](#) (Q1248784)
3. We have defined the following properties for this class:
  - a. `iataCode`  $\rightarrow^1$  string
  - b. `icaoCode`  $\rightarrow^1$  string

**yago:AstronomicalObject**

1. subclass of `schema:Place`.
2. This class is mapped to the following Wikidata class: [astronomical object](#) (Q6999)
3. We have defined the following properties for this class:
  - a. `parentBody*†`  $\rightarrow$  `AstronomicalObject*`
  - b. `mass*`  $\rightarrow$  decimal
  - c. `distanceFromEarth*`  $\rightarrow$  decimal
  - d. `luminosity*`  $\rightarrow$  decimal
  - e. `parallax*`  $\rightarrow$  decimal
  - f. `radial velocity*`  $\rightarrow$  decimal

**schema:Product**

1. The `schema:Product` class is intended to work as an top-level class that we have imported from schema.org, it is a subclass of `schema:Thing`
2. This class is mapped to the following Wikidata class:
  - a. [product](#) (Q2424752)
3. We have defined the following properties for this class:
  - a. `award`  $\rightarrow$  `Award*`
  - b. `manufacturer`  $\rightarrow$  `Corporation`
  - c. `dateCreated`  $\rightarrow^1$  *time format*
  - d. `gtin`  $\rightarrow$  string
  - e. `material`  $\rightarrow$  `Product`

## schema:Taxon

1. subclass of `schema:Thing`
2. This class is mapped to the following Wikidata class:
  - a. [taxon](#) (Q16521)
3. We have defined the following properties for this class:
  - a. `parentTaxon†`  $\rightarrow$  `Taxon`
  - b. `consumes*`  $\rightarrow$  `Taxon`

## schema:Intangible

1. subclass of `schema:Thing`, as an umbrella for `Language`, `Award`, etc...
2. This class is not mapped to any Wikidata class, as the intangible classes of WikiData are very noisy
3. This class does not have any class-specific properties in Schema.org

## yago:Award

1. The `yago:Award` class is a bottom-level class that we have manually added, it is a subclass of `schema:Intangible`. The class is needed as an object type for the `schema:award` property.
2. The `yago:Award` class is mapped to [award](#) (Q618779)
3. We define the following property for the `yago:Award` class:
  - a. `conferredBy*`  $\rightarrow$  (Person or Organization)

## yago:BeliefSystem

1. The `yago:BeliefSystem` class is a bottom-level class that we have manually added, it is a subclass of `schema:Intangible`. It is needed for religious convictions of people, and the newly added `yago:beliefSystem`.
2. The `yago:BeliefSystem` class is mapped to
  - a. [belief system](#) (Q5390013)
3. We cannot add any properties because religions are classes in Wikidata

## yago:Gender

1. The `yago:Gender` class is a bottom-level class that we have manually added, it is a subclass of `schema:Intangible`.
2. The `yago:Gender` class is mapped to [gender identity](#) (Q48264)
3. We do not define any properties for this class. It is needed as object type for `schema:gender`.

## schema:Language

1. The `schema:Language` class is a bottom-level class that we have imported from schema.org, it is a subclass of `schema:Intangible` and acts as the range of properties like the `<knowsLanguage>` property of `schema:Person`
2. This class is mapped to the following Wikidata class: [language](#) (Q34770)
3. We have defined no property for this class.

## yago:FictionalEntity

1. The `schema:FictionalEntity` class is a bottom-level class that we have imported from `schema.org`, it is a subclass of `schema:Thing`
2. This class is mapped to the following Wikidata classes:
  - a. [fictional entity](#) (Q14897293)
  - b. [imaginary character](#) (Q115537581)
  - c. [non-existent entity](#) (Q64728693)
  - d. [hypothetical entity](#) (Q18706315)
  - e. [character that may or may not be fictional](#) (Q21070598)
3. We have defined the following properties for this class:
  - a. `appearsIn` → `CreativeWork`
  - b. `author` → (Person or Organization)
  - c. `performer` → `Person`

## YAGO 4.0 Previous Properties

Property	Number of instances	Justification	Type (s=scholarly, b=biomedical, r=redundant, l=literal)
<http://schema.org/citation>:	174215756	scholarly articles are discarded	s

object named as (P1932)	Incorrect range
country (P17)	schema:countryOfOrigin
point in time (P585)	Redundant (cf. Event)
located in the administrative territorial entity (P131)	OK
PMCID (P932)	Excluded (scholar)
occupation (P106)	Now a class
coordinate location (P625)	schema:geo
determination method (P459)	Too specific
start time (P580)	schema:startDate
sex or gender (P21)	schema:gender
based on heuristic (P887)	Too specific
SIMBAD ID (P3083)	Excluded (scholar)
right ascension (P6257)	Too specific (astronomy)
declination (P6258)	Too specific (astronomy)
epoch (P6259)	Too specific (astronomy)
VIAF ID (P214)	Excluded (scholar)
Google Knowledge Graph ID (P2671)	OK
constellation (P59)	Too specific (astronomy)
given name (P735)	Incorrect range
found in taxon (P703)	subproperty of isPartOf
date of birth (P569)	OK
subject named as (P1810)	Incorrect range
parallax (P2214)	OK
Wikimedia import URL (P4656)	Meta-property
imported from Wikimedia project (P143)	Meta-property

right ascension component of proper motion (P10752)	Too specific (astronomy)
declination component of proper motion (P10751)	Too specific (astronomy)
Commons category (P373)	Meta-property
country of citizenship (P27)	OK
image (P18)	OK
end time (P582)	OK
part of (P361)	OK
radial velocity (P2216)	OK
ResearchGate publication ID (P5875)	Excluded (scholar)
family name (P734)	Incorrect range
Freebase ID (P646)	Meta-property
ortholog (P684)	Too specific (taxon)
GeoNames ID (P1566)	Technical property (metaproperty)
collection (P 195)	Too specific
parent taxon (P171)	OK
taxon name (P225)	Useless? (cf. label)
taxon rank (P105)	Too specific?
distance from Earth (P2583)	OK
copyright status (P6216)	Excluded (scholar)
subclass of (P279)	OK
chromosome (P1057)	Too specific (bio)
place of birth (P19)	OK
GBIF taxon ID (P846)	Too specific?
described by source (P1343)	Excluded (scholar)
exact match (P2888)	Technical property

date of death (P570)	OK
location (P276)	schema:geo
Entrez Gene ID (P351)	Too specific (bio)
full work available at URL (P953)	Excluded (scholar)
Elo rating (P1087)	Too specific
GNS Unique Feature ID (P2326)	Meta-property
inception (P571)	dateCreated
category combines topics (P971)	Technical property
GND ID (P227)	Meta-property
educated at (P69)	OK
languages spoken, written or signed (P1412)	OK
UniProt protein ID (P352)	Too specific (bio)
population (P1082)	OK
applies to jurisdiction (P1001)	Too specific
ORCID iD (P496)	Excluded (scholar)
heritage designation (P1435)	Too specific
Catalogue of Life ID (P10585)	Too specific
follows (P155)	OK
followed by (P156)	Redundant, inverse of follows
has part(s) (P527)	Redundant, inverse of partOf
postal code (P281)	OK
sport (P641)	Too
located in time zone (P421)	Too specific
WorldCat Identities ID (P7859)	Excluded (scholar)
official website (P856)	OK
member of sports team (P54)	sub-property of memberOf

copyright license (P275)	Excluded (scholar)
employer (P108)	Redundant with worksFor
